UESTC 3028: Advanced Project Skills Summer School

Presenting Technical Work

Dr Shuja Ansari

WORLD
CHANGING
GLASGOW

Adapted from slides of Prof Scott Roy

**THESE PRESENTATIONS ARE
AWESOME**

JUST KIDDING, I'M BORED

- 1. Review presentation organisation and logistics**
- 2. Provide guidelines for good design**
- 3. Explain minimum expected standards**
- 4. Discuss techniques for presentation delivery**
- 5. Outline issues of ‘nerves’ and how to cope**

- How do I put a presentation together ?
- What works ?
- What sucks ?
- How can I look good in public,...
- ...when this scares me half to death ?

- Consider
 - Topic
 - Audience
 - Setting
- Write your decisions down!

- Main message ? Consider short talk as an “extended abstract” - Tell a story.
- Principal points to message ? Pare ideas carefully and prepare supporting data.
- Overview / Outline / Conclusions.
- Graphics support (& occasionally entertain)

Audience Profile – Desired Effect

- Age ? Number ?
- General or Specialist ?
- Knowledge level (use of technical terminology)
- Interactive or passive ?
- What effect is desired ?
 - **Inform ? Sell ? Educate ? Impress ?**

- **Time?**
 - **Duration, Questions?, Morning/Afternoon**
- **Where?**
 - **Room size, shape, Numbers, location**
- **Kit?**
 - **Projector, OHP, slides, chalk/whiteboard**

- 3x5" Cards – Brainstorm
- **Design/Draft:** Intro, Main Body, Conclusion
- **Create:** Words & Graphics
- **Revise:** Does it really tell a coherent story?
- **Rehearse:** Does it sound good to the ear?
- **Time:** prepare, prepare, prepare.

ONE DOES NOT SIMPLY

**GIVE GOOD PRESENTATIONS
WITH NO PREP**

Opening Statement

- Content governs what to say :
 - Why important and what you've done, perhaps use a graphic, quote, figure,...
- Ideally the opening statement should grab attention.

- Content governs
 - what do I want to say?
- Tell the story logically
- Often “What did I do?” (state clearly) and “How did I do it?” (methodology)
- Flag benefits/advantages/limitations
- Be critical (academic presentation is to tell the balanced truth, not to sell)

- Acknowledge general help in first slide, and specific help 'in line'...(Loan 2004)
- Careful with formulae / algorithms
- A few well chosen results can clarify, too many statistical results just confuse
- Think of possible questions in advance and head off the nasty ones in material

- Ideally the closing statement should repeat the main points,
- be stated in a way to make it memorable,
- and repeating slides is just fine.

**NOT SURE IF THEY'RE CLAPPING FOR MY
PRESENTATION**

OR BECAUSE ITS FINISHED

What works or sucks?

University
of Glasgow

Visual – Do's

- Readable
- Clear
- Organised
- Attractive
- Easy to understand

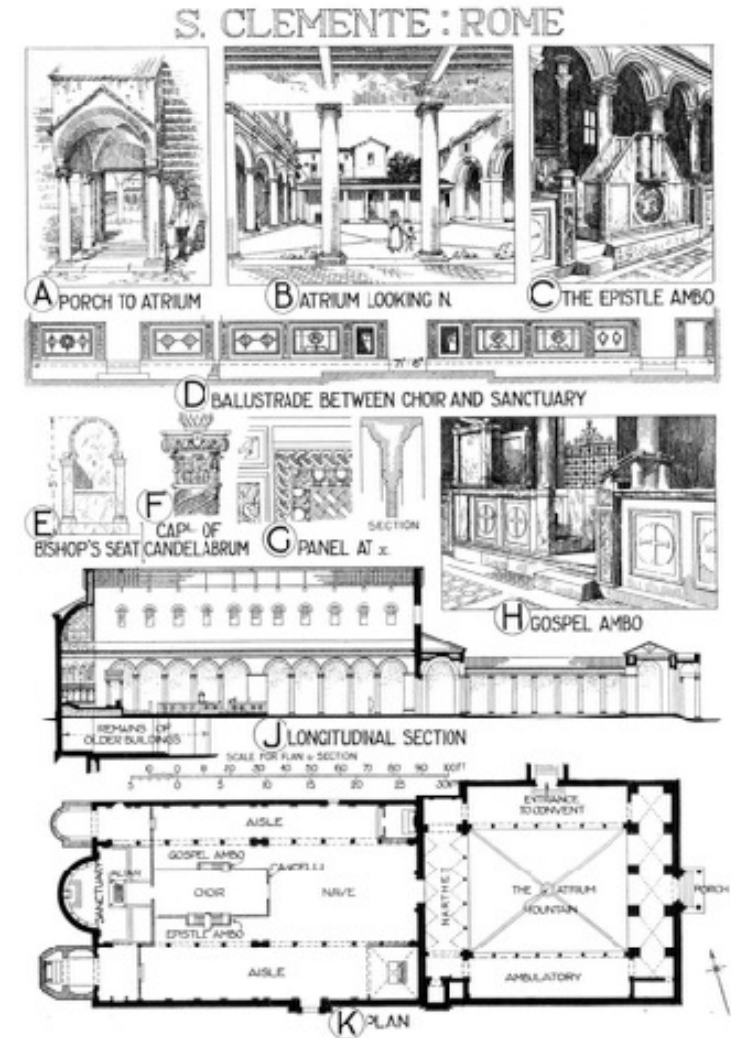

12. PRISM

Visual – Do not's

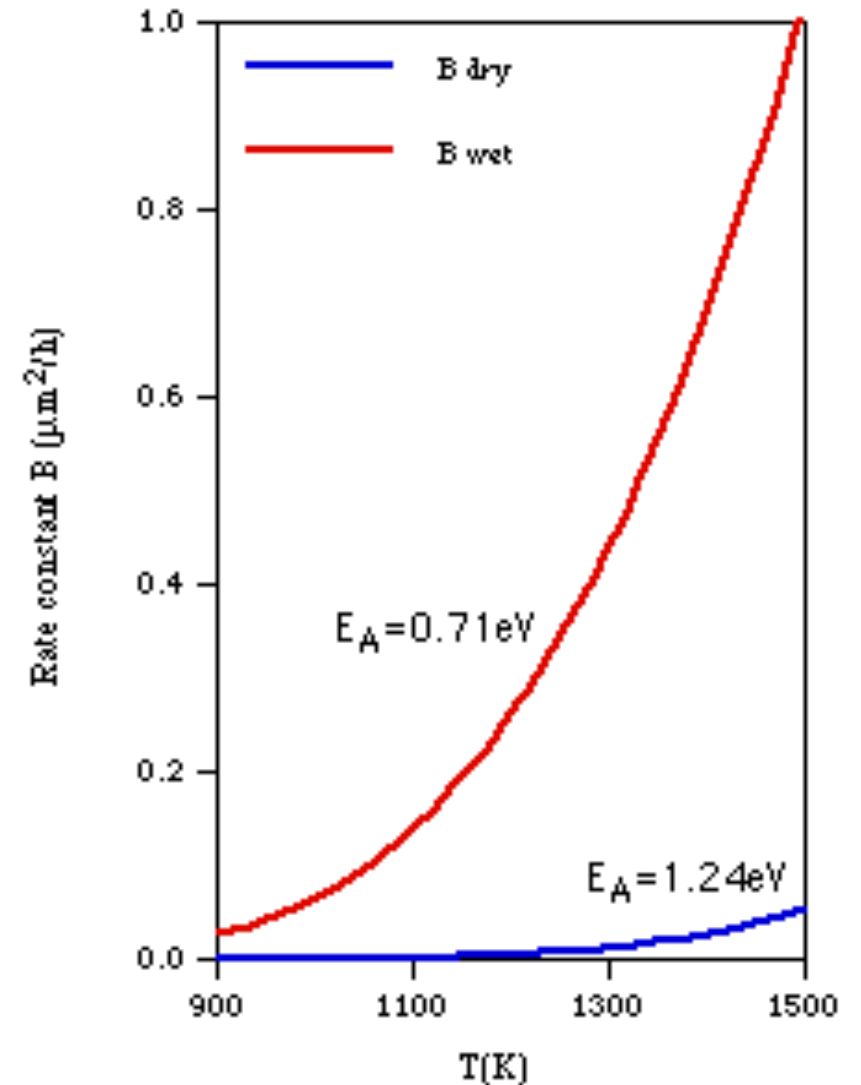

- Over Complexity
- Too many for the time
- Too small
- Too briefly on screen
- Poor organisation

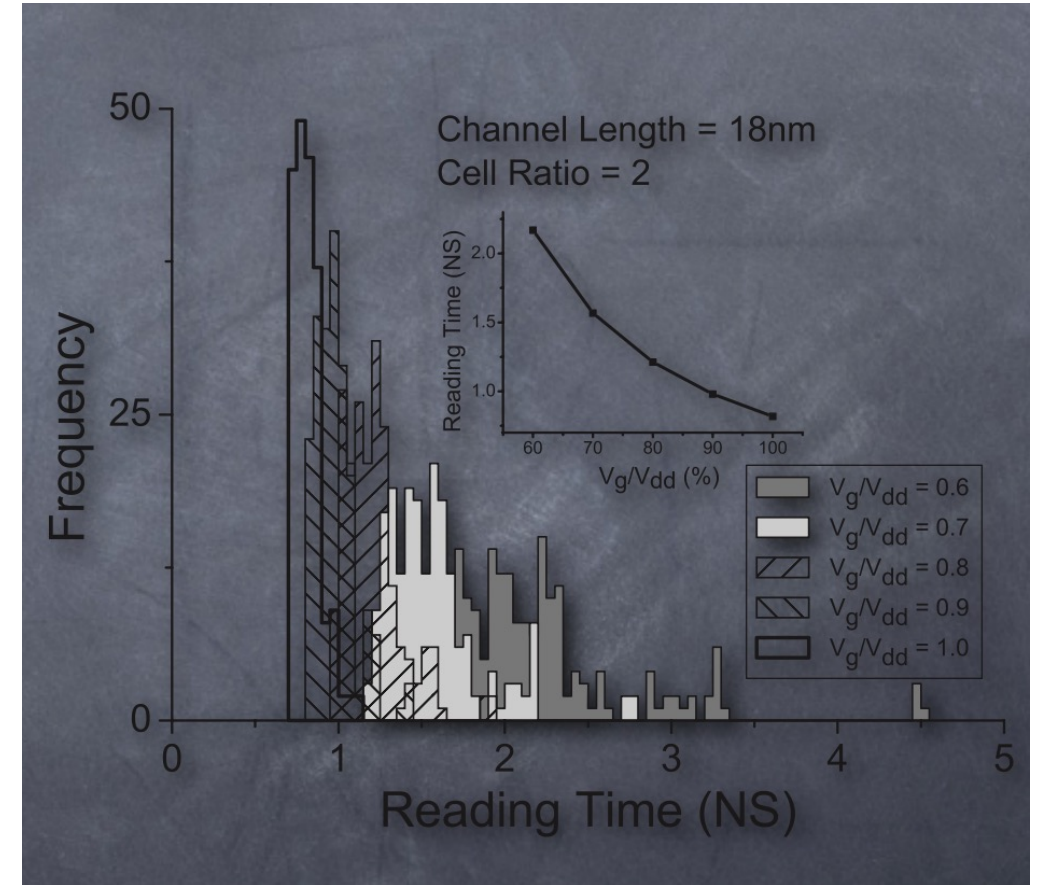

- Readable
- Clear
- Organised
- Attractive
- Easy to understand

Visual – Do's

- Over Complexity
- Too many for the time
- Too small
- Too briefly on screen
- Poor organisation

Visual – Do not's

- Only one Major Concept every 10 minutes
- Only one specific point every minute
- About one minute per visual
- LIMIT the number of slides
(extras after end, no interleave 'just in case')

- Eye Contact (to audience, not just one VIP)
- Smile / 'Open Face'
- Use pointer on screen
- Scribble on slides if useful
- Pre-plan 'jettison points', and put a watch on podium or prime a friend to time prompt.

- 4-5 seconds of silence before each new slide
- Clear Diction
- Well separated sentences
- Good 'transition' sentences
- 'One-liners' get a slide to themselves

- Uhm's and Ahh's, habitual 'ticks'
- Keeping keys, coins, rattles in pockets
- Stiffness or continual pacing
- Photocopies from papers / books

- Hardwired jokes
- Quoting directly the words on the slide
- Monotone voice aimed at ground
- Monospeed voice aimed at screen
- Going over time - short is good!

GIVES PRESENTATION

READS EVERY WORD

- Be familiar with the room
- Know your audience and know your material
- Visualise the presentation
- The audience wants you to be good
- Never apologise
- It's the message, not the audience
- Rehearse to mirror, then friends, then stop!

- Know the audience, auditorium, visual aids
- Organise and polish core ideas / arguments
- Graphics support argument, without fuss
- Arrange into a story
- Prepare well for the delivery

YOUR PRESENTATION SKILLS...

**TO INFINITY AND
BEYOND!**
